SERVICING NOTE

Flexible Circuit Board Repairing

- Keep the temperature of the soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

Notes on chip component replacement

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

TC-K333ESA Model

Checking the Operating Voltage

 Before operating the unit, be sure that the operating voltage of your unit is identical with that of your local power supply.

Where purchased	Operating voltage	
European countries	220 - 230 V AC, 50/60 Hz	
Other countries	120, 220 or 240 V AC adjustable, 50/60 Hz A voltage selector is located on the rear panel. If the selector must be reset, disconnect the AC power cord and set the selector to the appropriate voltage.	
*	VOLTAGE selector	
	220V 240V 120V	

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK A OR DOTTED LINE WITH MARK ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

For higher quality recording/playback

- The Dolby HX PRO* system which improves the linearity of the tape's high-range response during recording.
- Bias and recording level calibration which ensures optimum recording conditions to bring out the best in every tape.
- Three-head system (separate recording, playback and erase heads) which allows you to instantly check the recorded sound while recording is in progress.
- Ceramic cassette holder for improved stability of tape running during playback and recording.
- Professional-level deck design for high mechanical stability and maximum performance.

For your convenience

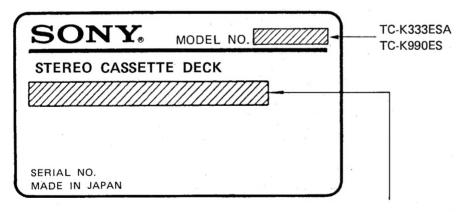

- The AMS and Memory Play functions which provide easy access to a desired selection.
- Timer-activated playback and recording through the use of an optional timer.

For easier operation

• Easy-to-read linear counter which shows the elapsed recording or playing time.

MODEL IDENTIFICATION

-Specification Label-

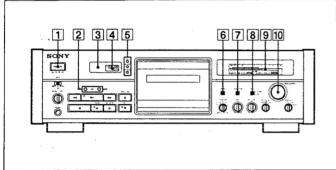

AEP, Germany Model: AC: 220-230 V ~ 50/60 Hz

E Model: AC: 120, 220-240 V ~ 50/60 Hz

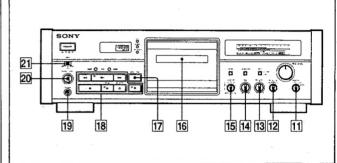

SECTION 1 GENERAL

This section is extracted from instruction manual.

Identifying the Parts

Identifying the **Parts**

Front Panel

For details, refer to the page number indicated in parenthesis.

- 1 POWER switch
- 2 AMS (Automatic Music Sensor) buttons (24)
- 3 Remote control sensor You can remotely control this cassette deck with:
 - The supplied remote commander.
 - A remote commander that came with a Sony amplifier or receiver if it has the 🖪 mark and cassette deck control capability.
 - An optional Sony remote commander with the I mark and cassette deck control capability.
- 4 LINEAR COUNTER (28)
- 5 Counter buttons RESET button (28) MEMORY button (26, 28)
- DISPLAY MODE button (20) 6 Dolby HX PRO button (48)
- 7 CALIBRATION button (42)
- 8 INPUT button (30)
- 9 PEAK PROGRAM METER (34)
- 10 REC (recording) LEVEL control (30, 34)

(Continued on next page.)

Front Panel

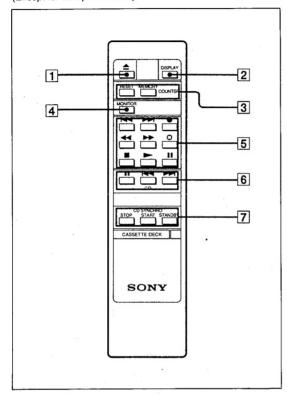

For details, refer to the page number indicated in (parenthesis).

(Continued from previous page.)

- 11 MONITOR switch (36)
 12 REC EQ CAL (recording equalizing calibration) switch (LOW, NORMAL, HIGH) (44)
- 13 REC (recording) LEVEL control for calibration (38, 42)
- 14 BIAS control (38, 42)
- 15 DOLBY NR (noise reduction) /MPX FILTER switch (20, 30)
- 16 Cassette holder
- 17 ≜ OPEN/CLOSE button
- 18 Tape operation buttons and indicators
 - ◄ (rewind) button
 - (stop) button
 - (play) button and indicator
 - ▶► (fast-forward) button
 - REC (recording) button and indicator
 - II PAUSE button and indicator
 - O REC MUTE (record muting) button (50)
- 19 PHONES jack (stereo phone jack) (22)
- 20 PHONE (headphones) LEVEL control
- 21 TIMER switch (54)

Identifying the Parts

(Except for European model)

REMOTE Commander

The controls on the REMOTE commander are identical in function and operation to those with the same name on the main unit.

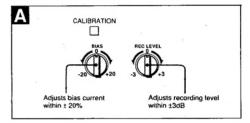

For details, refer to the page number indicated in (parenthesis).

- 2 DISPLAY button
- 3 Counter buttons
- MONITOR button
- 5 Tape operation buttons
- 6 CD (Compact Disc) buttons for controlling Sony CD players
 - II (pause) button
 - I buttons for locating selections sequentially
- [7] CD SYNCHRO buttons for synchronized recording with a Sony CD player

Making an Optimum Recording

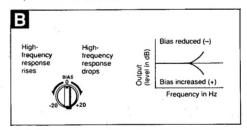

Bias and Recording Level Calibration

There are many different types of cassettes on the market, each with varying magnetic properties. Although your unit is equipped with the ATS (Automatic Tape Selection) system which sets the appropriate equalization characteristics and bias current for each tape type, an additional calibration adjustment can often produce even better results. Use the bias current and recording level calibration function to obtain the optimum recording conditions for your tape.

Bias calibration

Choosing the optimum bias current for a tape ensures minimum distortion and flat frequency response. Lowering the bias current boosts high-frequency response, but also results in higher distortion. Raising the bias, on the other hand, reduces distortion, but also dampens high-frequency response. Optimum bias is thus obtained when the bias current and high-frequency response are well balanced.

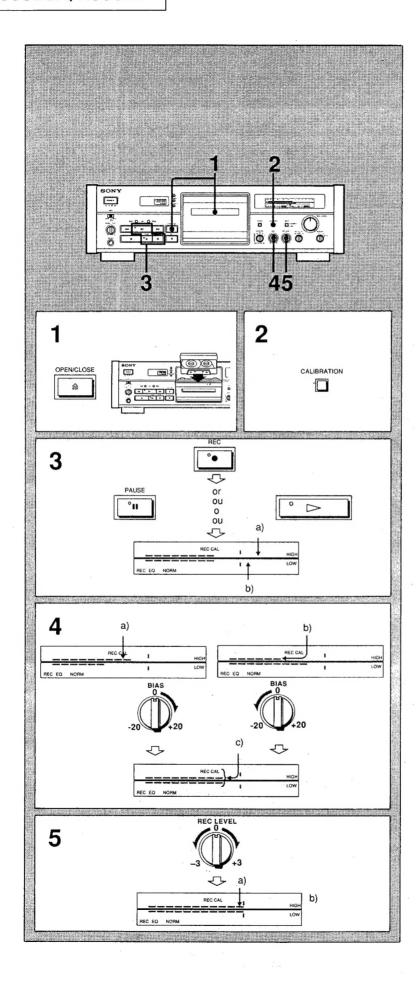

- If the bias current is higher or lower than the optimum setting for a certain tape, the frequency response changes as shown in the Chart in Fig.

 . Changing the bias can thus be used to tailor the response to your liking, for example by slightly emphasizing the upper or lower end.
- The frequency response of metal tapes is much less affected by changes in the bias current than other tape types. With some tapes, the adjustment range of this deck (±20%) may therefore not be sufficient to cover every possible requirement.

Recording level calibration

Even when the recording level is adjusted correctly, using a tape with low sensitivity will result in a low playback level. The REC LEVEL calibration control allows you to compensate for sensitivity differences among tapes to equalize both recording and playback levels. This is especially important when using the Dolby NR system, since it is most effective when recording and playback levels are the same.

Making an Optimum Recording

- 1 Insert the cassette to be used for recording.
- 2 Press CALIBRATION.
- 3 Press , then II or ➤ to activate the recording test tone.
 - a) Playback level for an 8-kHz signal
 - b) Playback level for a 400-Hz signal

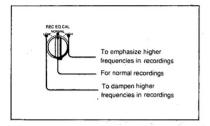

Note

- The sound cannot be monitored during the calibration operation.
- It takes 2 to 3 seconds for the test tone level to stabilize.
- 4 Adjust BIAS until both meters indicate equal playback levels.
 - a) A high reading on the upper meter indicates a low bias current.
 - b) A low reading on the upper meter indicates a high bias current.
 - c) An equal reading on both meters indicates the optimum bias current condition.
- 5 Adjust REC LEVEL CALIBRATION until both meters reach the recommended level (REC CAL).
 - a) Recommended level
 - b) The bias current is now adjusted to the optimum level and the tape sensitivity compensation has been set. Press ■, then set CALIBRATION to OFF. Rewind the tape and start the actual recording.

Making an Optimum Recording

Recording Equalization Calibration

Although bias currrent and equalization are automatically set by the Automatic Tape Selection (ATS) function for the tape being used, you can use the REC EQ CAL switch to change the recording characteristics according to the nature of the source material or to compensate for the particular characteristics of the tape.

Bias Calibration Recording

Use the REC EQ CAL switch in conjunction with the BIAS control to modify bands of sound and record according to the tape's characteristics.

- When recording music which has strong middle and low frequencies
 Set the bias at flat with the REC EQ CAL switch set in the HIGH position to increase the bias current.
 Adjust the BIAS control so that the HIGH and LOW meters indicate equal readings.
- When recording music which has strong high frequencies
 Set the bias at flat with the REC EQ CAL switch set in the LOW position to decrease the bias current.
 Adjust the BIAS control so that the HIGH and LOW meters indicate equal readings.

Note

With metal tape, because the amount of frequency characteristic modulation is not in proportion to that of the bias, the optimum bias current may not be obtained using the methods above.

Another use of the REC EQ CAL switch

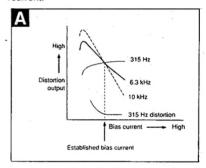

When using special tapes, adjusting the BIAS control with the REC EQ CAL switch set in the NORMAL position may not result in equal readings on the HIGH and LOW meters. If this occurs, adjust the BIAS control after setting the REC EQ CAL switch to HIGH or LOW.

Recording

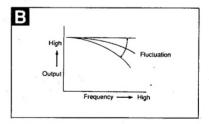

What is the Dolby HX PRO System?

The Dolby HX PRO system provides improved linearity in high-range frequency response during recording. Tapes recorded with this system retain the same high quality even when played back on other tape decks.

As shown in Fig. A, characteristics such as output level and distortion differ widely according to the bias (high-frequency) current

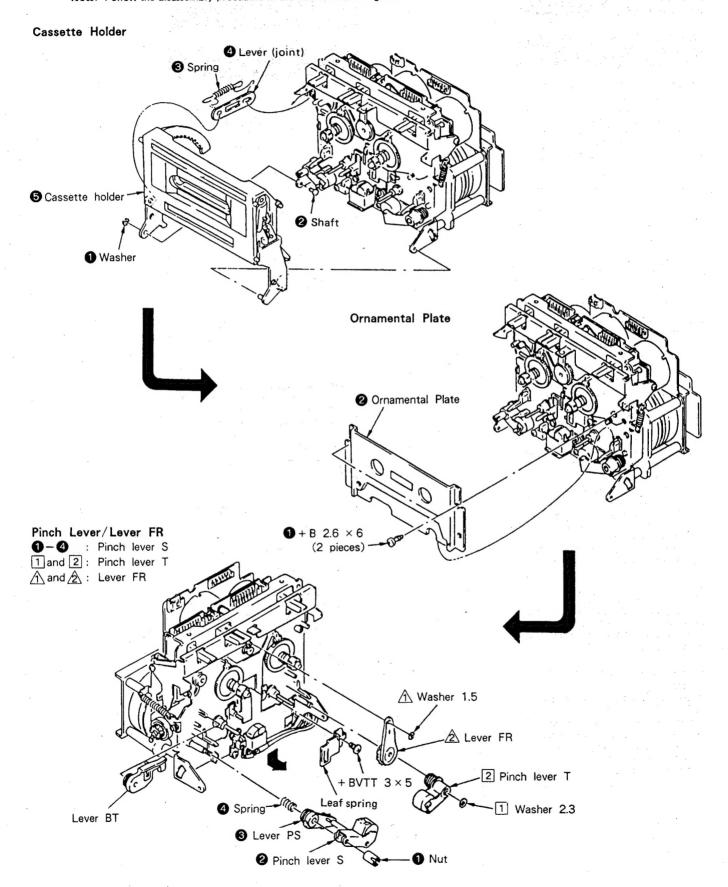

In conventional systems (see Fig. B), the bias current is susceptible to variations in certain recording signals which may cause fluctuations in frequency response, distortion, or other unwanted characteristics.

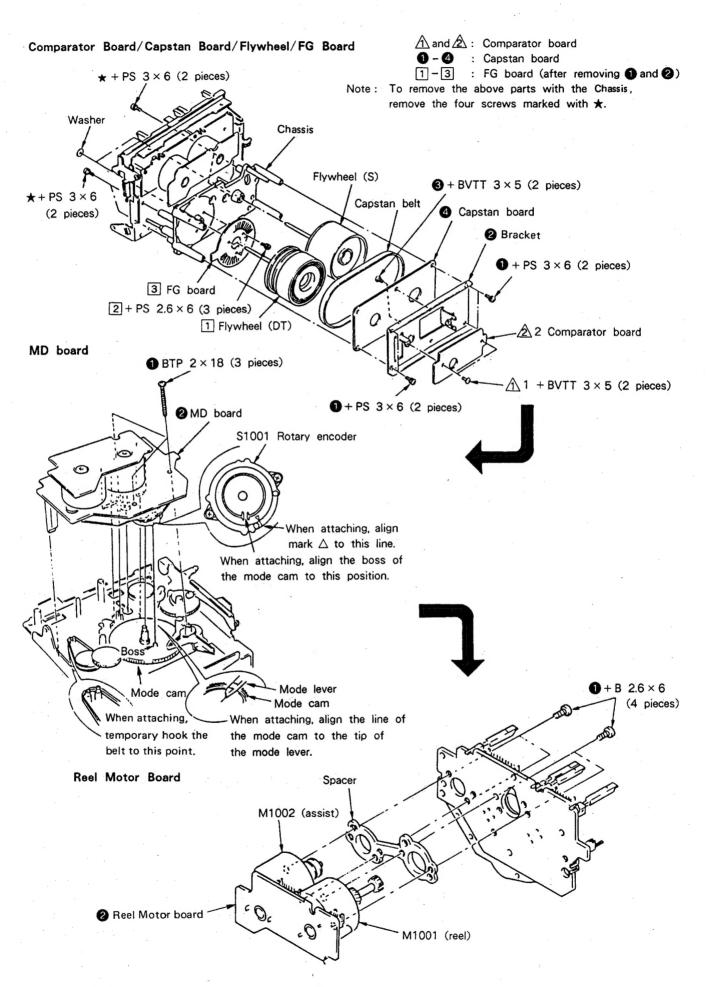

With the Dolby HX PRO system, the effective bias amount added to the bias current is controlled in millisecond units to greatly reduce distortion, improving linearity in high-range response and ensuring high-intensity recording with minimal distortion and noise.

SECTION 2 DISASSEMBLY

Note: Follow the disassembly procedure in the numerical order given.

SECTION 3 ADJUSTMENTS

3-1. MECHANICAL ADJUSTMENTS

PRECAUTION

1. Clean the following parts with a denaturedalcohol-moistened swab:

record/playback head

pinch roller

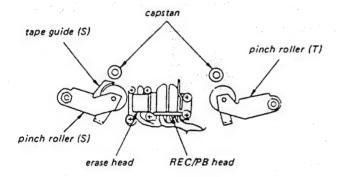

erase head

rubber belts

capstan

idlers

- 2. Demagnetize the record/playback and erase head with a head demagnetizer.
- 3. Do not use a magnetized screwdriver for the adjustments
- 4. After the adjustments, apply suitable locking compound to the parts adjusted.
- 5. The adjustments should be performed with the rated power supply voltage unless otherwise noted.

Tape Path Adjustment

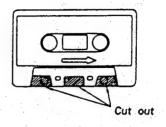

•Refer to Adjustment Position on page 12.

Note: When using the adjustment methods for other than replacement reasons, please do not tamper unnecessary with the adjustment screws or the erasehead because either the supply pinch roller guide or the record/playback head will be made the standard tape paths. Moreover, when it is necessary to adjust and replace two or more of any of the heads and/or pinch rollers, replace them one by one, completely taking out first tape path, and then replacing second one.

Preparation:

1. Mirror cassette CQ009C 8-909-708-01 (or CQ012C 8-909-708-02)

If one dose not have this, cut out the sections of a 120 -minute cassette shell as indicated below and use that cassette.

2. Phillips screwdriver (medium-size):

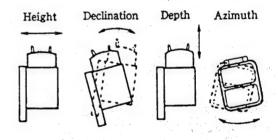

For the head adjustment screws

Blade -type screwdriver (large-size):

For the supply pinch roller adjustment screws

- 3. Pen light
- 4. WS-48B(3 kHz, 0 dB)
- 5. P-4-A100(10kHz, -10dB)

Definition of Terms: The figures are of a record/playback head.

Adjustment method:

Supply Pinch Roller

Note: Only perform this adjustment when the supply pinch roller is to be replaced.

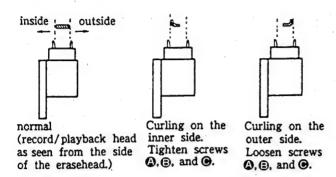

- Insert the mirror cassette and put the unit in record/playback mode.
- 2. Check to see whether the tape is curling at the record/playback head guide or the pinch roller guide.
 If it is curling, remove the curl by adjusting the tape curl adjustment screw. Then, check that the tape is running past the middle of the erasehead.

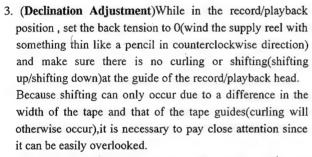

Record/playback Head

Note: Only perform this adjustment when the record/play-back head is to be replaced.

- Insert the mirror cassette and put the unit in record/playback mode.
- 2. (Height Adjustment) Check to see if the tape is curling at the tape guide of the head. If it is curling, tighten screws (a),
 (a), and (b), respectively by the same angle, moving the head so that it remains at the same angle throughout the

procedure, If it curls on the bottom side of the mirror cassette (actually the inner side), tighten all the screws equally; but loosen them if the tape begins to curl on the top side(other side).

When there is a shift, tighten screws ② and ④ equally and change the declination of the head. If the tape is shifting up, tighten the screws, and if it is shifting down, loosen them.

4. Repeat the adjustments in steps 2 and 3 and fine adjust the height and the declination.

5. (Preliminary Azimuth Adjustment)

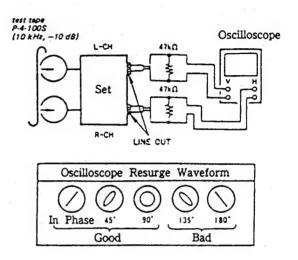

After demagnetizing and cleaning the adjustment head, play back WS-48B(3kHz, 0dB).

Turn screw **©** so that the reading on the level meter of the unit or that of the level meter connected to LINE OUT is maximized.

If the screw is turned at least half a revolution, repeat the adjustments from step 1.

6. (Tape Path Check)Connect the oscilloscope to LINE OUT and play back P-4-A100 (10kHz,-10dB)to display a resurge waveform. After 20 seconds of record/playback (after the tension within the loop has been increased sufficiently), make sure the variation in the resurge is within \pm 90 degrees (within \pm 45 degrees is desired).

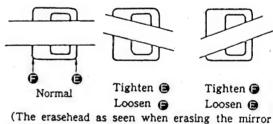

If the variation is greater than this, it is because the declination and/or the height adjustment is not prefect. Repeat the adjustment from step 1.

Erasehead

Note: Only perform this adjustment when the erasehead is to be replaced.

- 1. Insert the mirror cassette and put the unit in record/playback mode.
- 2. (Azimuth Adjustment)Adjust the azimuth of the erasehead by adjusting screws (a) and (b) so that the runs as evenly as possible.

(The erasehead as seen when erasing the mirror cassette.)

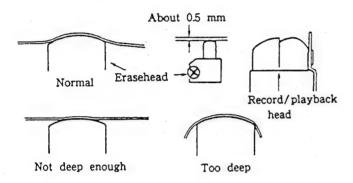

3. (Height adjustment) Turn screws ①, ②, and ② all by the same angle so that the portions of the erasehead visible at top and bottom are nearly of equal width. If the width at the top is greater, tighten the screws; if the width at the bottom is greater, loosen the screws.

Erasehead (The erasehead as seen through the mirror cassette.)

Tape

Make these the same width.

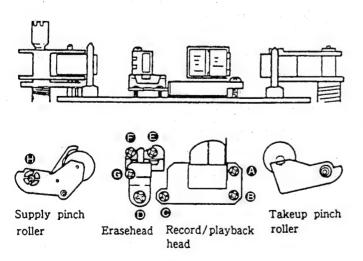

- 4. (Declination Adjustment)Leaving it in the playback position, put the back tension to 0 and make certain the erasehead part and supply pinch roller guide part do not shift, If there is a shift, turn the screw ① and change the declination. Looking at it using the mirror cassette, if the tape shifts up, tighten the screw, and if it shifts down, loosen the screw.
- 5. Repeat the adjustments beginning with step 2 and fine adjust the height and declination. And make sure the tape does not curl up on the pinch roller guide or the guide part of the record/playback head.
- 6. (Depth Adjustment)In order to make the entire head play the tape smoothly, and to make sure the depth of the erasehead is neither too shallow nor too deep, loosen screw a bit.

Check

- Check to make sure that there are no curls or shifts throughout the whole tape path and that the tape runs smoothly.
- 2. Reapply the locking compound to the adjusted screws.(The locking compound should only be applied to screwafter the azimuth has been adjusted.)

Adjustment Position: As seen from the cassette, side (top) and MD as seen head on (bottom).

Pinch Roller Pressing Force Measurement

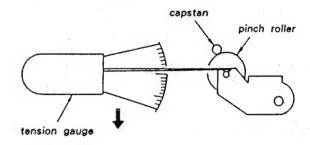

Mode: playback

Hook needle of the tension gauge to the pinch roller shaft and push back pinch roller to detach it from capstan .

Then, return it gradually to capstan and read the gauge when the pinch roller begins turning.

Standard Limits:

Tape-up side: 270 - 350 g(9.5 - 120z)Supply side: 180 - 280g(6.4 - 9.90z)

Torque Adjustment and Measurement

- 1. Insert a tape for torque measurement, CQ-102C, and put the set to PLAY mode. Adjust RV801 so that the reading of the torque meter is 40 \pm 5g.cm.
- After the adjustment, measure the back-tension and the FF/REW torque and check that the following specifications are satisfied.

Torque	Torque Meter	Reading
FWD	CQ102C	30-60g*cm (0.42-0.83oz*inch)
FWD Back tension	CQ-102C	7-11g*cm (0.09±0.015oz*inch)
FF/REW	CQ-201B	65 - 90g · cm (0.90 - 1.25 oz · inch)

3-2. ELECTRICAL ADJUSTMENTS

Note: The adjustment should be performed in the order given in this service manual.

The adjustment should be performed for both L-CH and R-CH.

- Simultaneous REC/PB Mode:
 Input the signals to LINE IN terminal and set to REC mode. Set the monitor switch to TAPE, and monitor the recorded signal from LINE OUT terminal.
- Switch Position:

 CENTER CLICK

REC LEVEL CENTER CLICK

• Standard Record:

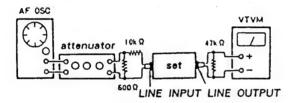

Deliver the standard input signal level to the input jack and set the REC LEVEL control to obtain the standard output signal level.

Standrad Input Level

Input Terminal	LINE IN		
source impedance	10kΩ		
input level	0.25 V (-10 dB)		

Standard Output Level

Output Terminal	LINE OUT	
load impedance	47kΩ	
output level	0.44 V (-5 dB)	

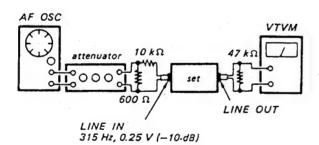

MPX FILTER Check

Setting: DOLBY switch: OFF

MPX FILTER switch: OFF

Procedure:

1. Mode: stop

- 2. Apply 315Hz, 0.25V(-10dB)signal and adjust REC LEVEL(RV501) control so that the LINE OUT level is 0.44V(-5dB).
- 3. Apply 19kHz 0.25V(-10dB)signal and confirm that the LINE OUT level is 0.013V(-35dB)or less.

Adjustment Limits:

DOLBY NR switch: B or C

MPX FILTER switch: Line output level when ON.

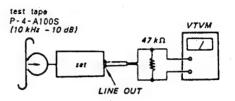

315Hz: Within 0.49 to 0.39V(within -4dB to -6dB)

19kHz: 0.013V(-35dB)or less.

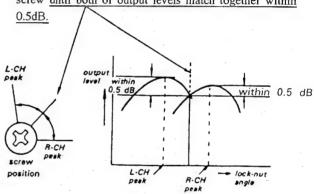

Record/Playback Head Azimuth Adjustment

Procedure:

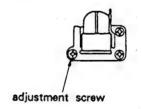

1. Mode: playback

2. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within

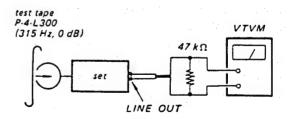

Adjustment Location:

Playback Level Adjustment

Procedure:

Mode: playback

Adjust RV101(L-CH)andRV201(R-CH)to obtain the specified LINE OUT level.

Adjustment Limits:

LINE OUT level: 0.301 to 0.338V

(-8.2 to -7.2 dB)

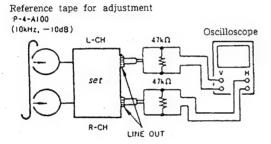

Level difference between channels:

less than 0.5dB

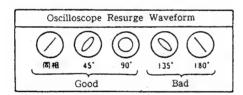

Check that the LINE OUT level does not change in playback mode while changing the mode from playback to stop several times.

3. Phase check

- Play mode -

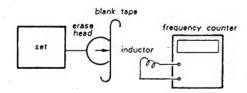

4. Check that the phase difference between L-ch and R-ch is within $0 \sim ($ same to $90^{\circ})$.

Bias OSC Frequency Adjustment

Procedure:

1. Record mode

- Connect the frequency counter to the inductor which functions at 10mH. (When the inductor is a closed magnetic circuit, redesign the inductor to be anopenmagnetic circuit.)
- 2. Remove the cassette lid, insert the cassette, and put the unit into REC mode.

- 3. Move the inductor from the side in close to the erase head to check the value of the bias.
- 4. Adjust CP501 so that the reading on the frequency counter is $105kHz \pm 1kHz$.

Bias current adjustment

- 1. Set the HX PRO switch to ON and insert the METAL tape.
- 2. Set RV104, RV204, RV105, RV205, RV106, and RV206 to be in the center position.
- 3. Connect a digital voltmeter to CNE504(between 2-1 and 2-3) and adjust the adjustment cores of T101 and T201 so that the voltage is minimized.

CrO₂ Bias and Record Level Adjustment

Note: This adjustment should be made before Record Bias Adjustment.

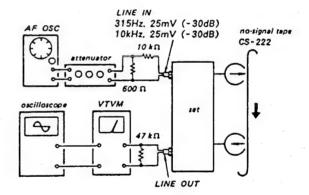

Setting:

REC LEVEL knob: standard record position. (See page 12.)

HX PRO switch: ON

Procedure:

1. Mode: simultaneous REC/PB

- Adjust RV106(L-CH)and RV206(R-CH)so that the playback output level of 10kHz signal is 0.3dB -0.3dB with respect to that 315Hz. ••• Record Bias Adjustment.
- 3. Adjust RV102(L-CH)and RV202(R-CH)so that the playback output level of 315Hz is -25.3dB to -24.7dB.

 ••• Record Level Adjustment.

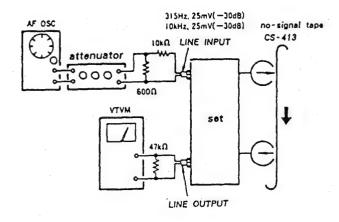

Metal Bias Adjustment

Setting:

REC LEVEL knob: standard record position. (See page 12.)

Procedure:

1. Mode: simultaneous REC/PB

2. Adjust RV510(L-CH)and RV205(R-CH)so that the difference between the playback output at 315Hz and that of 10kHz in R-CH is within 0.5dB to -0.5dB.

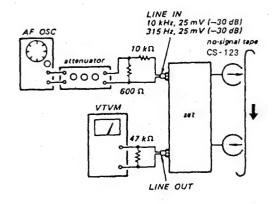

Normal Bias Adjustment

Setting:

REC LEVEL knob: standard record position. (See page 12.)

Procedure:

1. Mode: simultaneous REC/PB

- 2. Set the HXPRO switch to ON.
- 3. Adjust RV103(L-CH)and RV203(R-CH)so that the difference between the playback output at 315Hz and that of 10kHz in R-CH is within 0.5dB to -0.5dB.
- 4. Set the HXPRO switch to OFF.
- Adjust RV104(L-CH)and RV204(R-CH)so that the difference between the playback output at 10kHz when the HXPRO is ON and that of 10kHz when ON is within 0.5dB to -0.5dB.

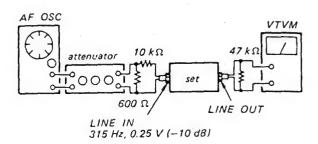

Meter Level Adjustment

Setting:

REC LEVEL knob: standard record position. (See page 12.)

Procedure:

1. Stop mode

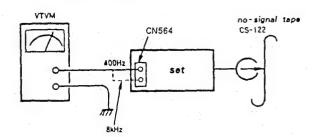

- 2. Adjust RV107(L-CH)and RV207(R-CH)so that a reading of the meter is set to 0VU and the lamp is list.
- 3. Adjust REC level so that the LINE OUT level is set to +10dB and check that all the lamps are lit.

Calibration OSC and Calibration Meter Adjustment

Setting: CALIBRATION switch: ON

Procedure(OSC OUT LEVEL):

1. Mode: record(no-signal(LINE INPUT))

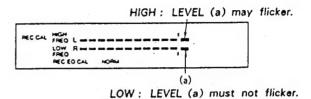

TC-K333ESA/K990ES

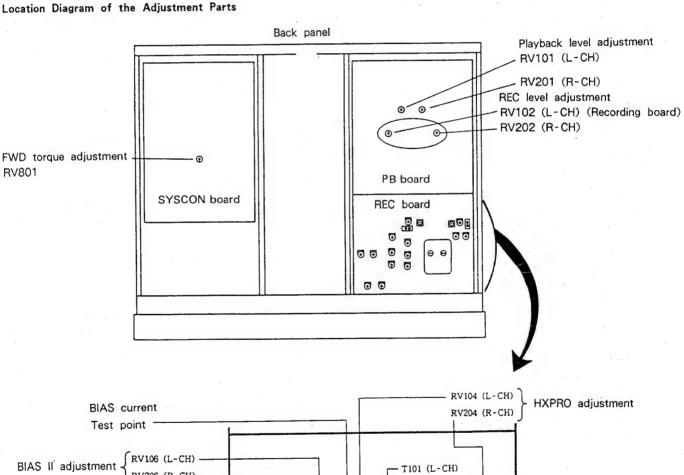

- 2. Adjust RV504 so that a check-point level at 400Hz is +10dB.
- 3. Adjust RV503 so that a check-point level at 8kHz is +10dB.

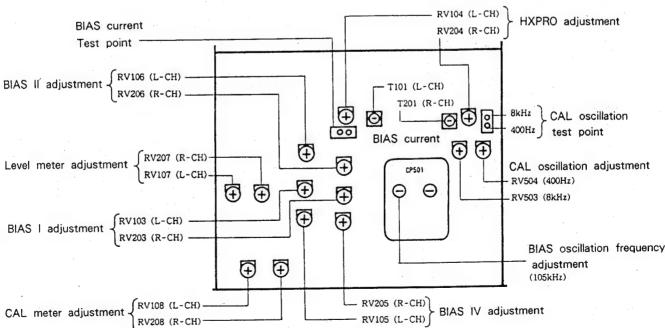

Procedure(CAL METER ADJ):

1. Put the set in record mode and adjust RV208(HIGH)so that HIGH FREQ segments in the CAL LEVEL meter light thoroughly up to OVU as shown in the figure below. Segment(a)may flicker.

2. Preset RV108(LOW)so that segment(a)in LOW FREQ CAL LEVEL meter lights. Then adjust RV204 to the point where segment (a)goes out.

SECTION 4 DIAGRAMS

4-1-1. IC502, 505 (CX20188) PIN FUNCTIONS

An electronic switch circuit for the operation mode control is included. Controls are performed by adding direct current voltages VH, VM, and VL to Dolby OFF/B/C and calibration/REC/Playback terminals.

VH	3 to 9.9V
VH	-0.7 to 0.7V
VL	-9.9 to -3

4-1-2. IC601 (M50940-313SP) PIN FUNCTIONS

Level meter display of 24-segment fluorescent display, etc., are performed by receiving direction from the master microcomputer (IC801).

Pin No.	Pin name	I/0	Description	
1.	Vref	I	A/D input-port reference voltage input(+5V)	
2.	φL	I	Not used. (Connected to +5Y)	
3.	φR	I	Not used. (Connected to +5V)	
4.	DATA	I	Data input from the master microcomputer(IC801)(analog)	
5. ∼ 6.	ADE1~ADRO	I	Data input from the master microcomputer(IC801)(analog)	
7.	KEY	I	Not used. (Connected to +5V)	
8.	LEVEL L	I	Level meter L-CH input(analog) from the meter amplifier(IC514)	
9.	LEVEL R	I	Level meter R-CH input(analog) from the meter amplifier(IC514)	
10. ~13.	GRID6∼GRID3	0	Not used.	
14. ~15.	GRID2∼GRID1	0	Fluorescent display grid output	
16.	<u>C00</u>	0	Not used.	
17.	PLAY	0	Not used. (Connected to pin (B.)	
18.	PLAY	0	Not used.	
19.	PAUSE	0	Not used.	
20.	REC	0	Not used.	
21.	TAPE	0 -	Fluorescent display segment output ("TAPE" displayed). "L": TAPE displayed. "H": SOURCE	
			displayed.	
22.	OVER LEVEL	0	Fluorescent display segment output ("OVER LEVEL" displayed). It is displayed when "L".	
23.	TYPE I	0	Fluorescent display segment output ("TYPE I" displayed). It is displayed when "L".	
24.	TYPE II	0	Fluorescent display segment output ("TYPE II" displayed). It is displayed when "L".	
25.	TYPE IV	0	Fluorescent display segment output ("TYPE II" displayed). It is displayed when "L".	
26.	CNVss	-	Power supply terminal(GND)	
27.	RESET	I	Reset input	
28.	XIN	I	Clock input(4MHz)	
29.	XOUT	0	Clock outupt.	
30.	XCIN	_	Not used. (Connected to GND)	
31.	XCOUT	-	Not used.	
32.	Vss	_	Power supply terminal(GND)	
33.	Φ	0	Not used.	
34.	VER	I	Version switching input(Always set to "L")	
35.	TEST	I	Test mode input. "L": All the lamps of the meter are lit.	
36.	CAL	Ī	Calibration switch(S602) input. "L": CAL mode. "H": Normal mode.	
37.	IN	I	Not used. (Connected to GND.)	
38.	VP	I	Fluorescent display segment output's pull-down power supply terminal(-22V)	
39. ~62.	S23~S0	0	Fluorescent display segment output(meter display)	
63.	AVcc	_	Power supply terminal(+5V)	
64.	Vcc	_	Power supply terminal(+5Y)	

4-1-3. IC801 (M50964-226SP) PIN FUNCTIONS

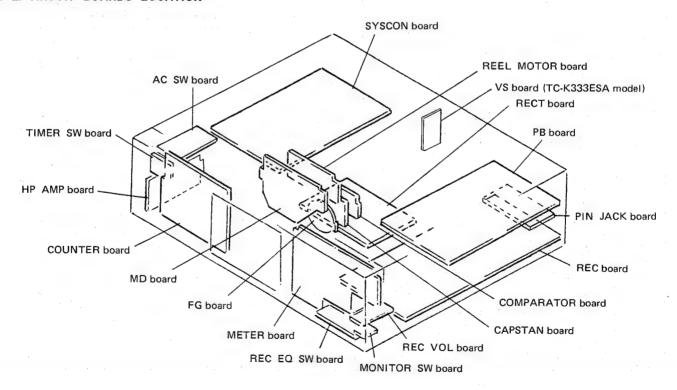

Pin No.	Pin name	I/0	Description
1. 2. 3. 4. 5.	VCC AV _{ss} Vref DATA PWM	- I 0 -	Power supply: +5V. Power supply: GND. A/D port reference voltage input. Data output (Analog) to Display Microcomputer. Not used for this model.
6. 7. 8. 9.	ADDRO REC PAUSE PLAY AD7	0 0 0 I	Data output to Display Microcomputer (TC601). REC LED output. PAUSE LED output. PLAY LED output. Key input.0V= ▲ , 1V= ■ , 2V= ← , 3V= → , 4V= ● .
11. 12. 13. 14. 15.	AD6 AD5 TIMER SW T-PULS S-PULS	I I I I	Key input. 0V= ▶ , 1V= Ⅱ , 2V= ₩ , 3V= ₩ , 4V= O . Key input. 0V=RESET , 1V=MEMORY , 2V=DISPLAY MODE Timer switch input (Analog). 0V=REC , 1V=PLAY , 2V=0FF. Take-up reel base sersor input. Supply reel base sersor input.
16. 17. 18. 19. 20.	COUNT 0 RSTOUT S-CLOCK S-OUT	I - 0 0	Not used for this model (Cnnected to GND). Not used for this model (Cnnected to GND). Reset output to counter Microcomputer (IC881). Shift clock output (250kHz) to Counter Microcomputer (IC881). Serial data output to Counter Microcomputer (IC881).
21. 22. 23. 24. 25.	S-IN SIRCS-L SIRCS-E POW-OUT POWER IN	I I O I	Not used for this model (Connected to S-OUT). SIRCS phase input. SIRCS hegative phase input. Not used for this model (Connected to GND). Power down detection input.
26. 27. 28. 29. 30.	INTI CN Vss RESET XIN XOUT	I - I I 0	Power down detection input. Power supply: GND. Reset input. Clock input (4MHz). Clock output (4MHz).
31. 32. 33. 34. 35.	Φ OUT V _{ss} PAT3 PAT2 PAT1	- I I I	Not used for this model. Power supply: GND. Rotary encoder input to detect the position of the head base of the mechanical block. Rotary encoder input to detect the position of the head base of the mechanical block. Rotary encoder input to detect the position of the head base of the mechanical block.
36. 37. 38. 39. 40.	PATO OPEN SW CLOSE SW DOOR SW REC SW	I I I I	Rotary encoder input to detect the position of the head base of the mechanical block. OPEN switch input of the mechanical block. CLOSE switch input of the mechanical block. DOOR switch input of the mechanical block. REC switch input of the mechanical block.
41. 42. 43. 44. 45.	70 µ SW HALF SW METAL SW — CAM DOWN	I I - 0	70 μ switch input of the mechanical block. HALF switch. METAL switch. Not used for this model (Connected to GND). Head base DOWN output of the mechanical block.
46. 47. 48. 49. 50.	CAM UP M-FWD M-REV M-PLAY M-FAST	0 0 0 0	Head base UP output of the mechanical block. Reel motor rotate with FWD. Reel motor rotate with REV. Reel motor rotate at PLAY speed. Reel motor rotate at FF/REW speed.
51. 52. 53. 54. 55.	BIAS REC MUTE MONITOR OUT LINE MUTE	0 0 0 0	Bias oscillation on and off control. REC MUTE control output. MONITOR switch output. Line mute control output. Not used for this model (Connected to GND).
56. 57. 58. 59. 60.	AMS MODE TYPE II TYPE II TYPEIV AMS SIG	0 0 0 0 I	AMS switch output. REC equalizer change output. REC equalizer change output. REC equalizer change output. REC equalizer change output. AMS signal input. No song detected=Low. Song detected=High.
61. 62. 63. 64.	SOURCE SW TAPE SW CAL SW ADDR1	I I I 0	MONITOR switch input. MONITOR switch input. CALIBRATION switch input. Data output to Display Microcomputer.

4-1-4, IC881 (HD404240A31S) PIN FUNCTIONS

Fluorescent dynamic display is performed by receiving count data from the master microcomputer (IC801)

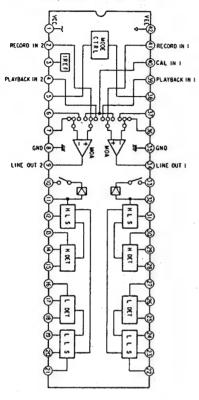

Pin No.	Pin name	I/0	Description
1.	G3	0	Fluorescent display grid output
2.	G4	0	Fluorescent display grid output
3.	dot	ò	Fluorescent display segment output
4.	P DWN	Ī	Pull-down power supply terminal for fluorescent display segment output (-22V)
5. ~11.	g∼a	0	Fluorescent display segment output
12.	_	-	Not used.
13. ~16.	DIM1~DIM4	I	Dimmer input (Pins (4) and (5) are "H". Others are opened and fixed: Blanking time 550usec;
			grid ON time 450usec.)
17. ~20.	~	-	Not used.
21.	Vcc	-	Power supply terminal (+5V)
22.	SCK	I	Shift clock input (250kHz) from the master microcomputer (IC801)
23.	SI	I	Serial data input (Data are sent by 1 byte every 6msec.) from the master microcomputer
		-	(IC801)
24. ~25.		-	Not used.
26.	RESET	I	Reset input from the master microcomputer (IC801). Reset when "H".
27.	TEST	1	Connected to +5V.
28.	OSC1	I	Clock input (4MHz)
29.	OSC2	I	Clock input (4MHz)
30.	GND	-	Power supply terminal (GND)
31. ~34.	-	-	Not used.
35.	MLED	0	Not used. (Connected to +5V)
36. ∼40.	_	-	Not used.
41.	G2	0	Fluorescent display grid output
42.	Gl	0	Fluorescent display grid output

Note: The components identified by mark \bigwedge or dotted line with mark \bigwedge are critical for safety.

Replace only with part number specified.

AC SW

CAPSTAN

COMPARATOR

SECTION 6 ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the part specified in the diagrams or the components used on the set.
- -XX,-X mean standardized parts, so they may have some difference from original one.
- RESISTORS

All resistors are in ohms

METAL: Metal-film resistor

METAL OXIDE: Metal Oxide-film re-

sistor

F: nonflammable

 Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

• SEMICONDUCTORS

In each case,u : μ ,for example :

uA...: μ A..., uPA...: μ PA..., uPB...: μ PB..., uPC...: μ PC...

uPD...: μPD...

• CAPACITORS

uF: μF

• COILS

 $uH: \mu H$

The components identified by mark

or dotted line with mark

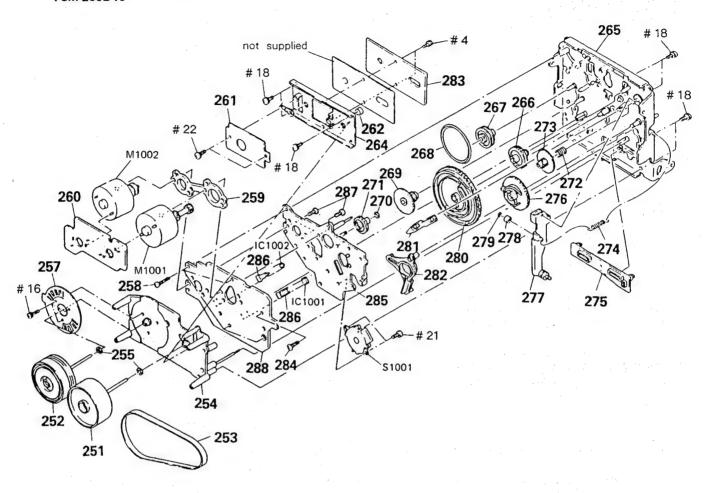

are critical for safety.

Replace only with part number specified.

When indicating parts by reference number, please include the board name.
